INTRODUCING HELIOVOLTA

We provide third-party QA/QC and technical field services to help renewable energy and storage stakeholders achieve both system safety and reliability through project lifecycles.

THE HELIOVOLTA ADVANTAGE

7+ GWs of project experience

50+ years of industry experience

500+ projects inspected

NABCEP-certified PV system inspectors

SolarGrade fieldwork management software

HelioVolta developed **SolarGrade**, the fieldwork management software for faster, more accurate asset inspections and reports.

Our Independent Inspections and Technical Services

QA/QC and System Audits

Third-Party Health Assessments

Audits asset health and identifies risks before failure.

Construction QA/QC

Ensures best practices at installation.

Post-Commissioning Inspections

Validates system operates to design; creates punch lists.

End of EPC Warranty Inspections

Identifies outstanding workmanship issues.

Technical Services

Failure Root Cause Analysis

Diagnoses of underlying issues when systems have thermal events or underperform.

Technical Advisory Support

Establishes construction and O&M quality standards. Informs technical decisions and due diligence for investors and other project stakeholders.

ABOUT SOLARGRADE

The cloud-based platform for smarter, faster renewable energy fieldwork and asset management.

SolarGrade empowers teams to operate safe, reliable, and high-performing renewable assets — **at scale, on time, and on budget.**

- Be 30% more efficient in the field
- Increase production with more uptime
- Prevent safety events with standardized QA/QC
- Elevate asset care with better data

SolarFax™ and SolarTwin™ are data analytics tools within the SolarGrade platform.

SolarFax™ is a data analytics module that pairs system-level energy yield and performance data with **SolarGrade** health assessments.

SolarFax™ reports provide a complete view of PV system health, safety, performance, and reliability.

SolarTwin™ utilizes data from **SolarFax™** and **SolarGrade** to generate digital representations of physical PV assets.

This digital twin allows users to have a clearer picture of PV assets to drive more productive and reliable assets.

KEY FEATURES

- Georeferenced issue tagging
- Mobile photo capture and editing
- Pre-built, pre-loaded inspection protocols (customizable)
- Pre-written, pre-loaded issue descriptions (editable)
- Integrated as-builts with mark-up tools
- Automated reporting and punch lists
- Split up and assign tasks in the field, even off-line
